Kenneth Lasyone

Software Engineer

Houston, TX | Kl3mta3@gmail.com | KennethLasyone.org | Github.com/kl3mta3

Dear Hiring Manager,

I am excited to apply for a software development role where I can leverage my skills in backend development, network security, and system optimization to deliver innovative solutions. My passion for creating scalable and secure systems has driven me to continuously push boundaries and improve both processes and technology.

As the Founder and Lead Engineer of the SPHERE Network, I designed a decentralized encrypted communication framework from the ground up. This project required advanced cryptographic protocols, custom packet handling, Distributed Hash Table (DHT) routing, and end-to-end encryption. It strengthened my ability to solve complex technical challenges while ensuring security and scalability.

In addition to SPHERE, my work as a Software Engineer has equipped me with experience in automating workflows, optimizing infrastructure, and enhancing system security. I've developed robust backend systems and streamlined processes for improved performance and reliability, always with a focus on meeting both user and business needs.

I am eager to bring my skills and passion for technology to a team that values innovation, security, and efficient development practices. I would welcome the opportunity to discuss how my experience can contribute to your company's ongoing success.

Thank you for considering my application. I look forward to connecting soon.

Sincerely,
Kenneth Lasyone
